My participation came at a turning point in my career, where I had limited management experience under my belt. It gave me added confidence in the things I was already doing well, and gave me a few things to work on that ultimately helped me to succeed at my management position and be promoted into a Director role.

Great training opportunity that presented itself at a time when my career was just launching. I can see the program’s benefits for individuals at various stages of their career. I feel fortunate that I was able to complete this training early on and apply what I learned.

Because of what I learned at ASA, our entire organization has had a shift in thinking about HOW we serve clients and how to make that happen. There is a more positive energy within our organization.

I have learned better how to advocate for myself in my role, as well as, for my clients. This resulted in a promotion within the organization.

All of this means stronger leaders, better aging networks, and well-supported communities.

Past foundation support for the ASA Leadership Institute provided by
